

# Quick Intro Into Kanban

*#SperasoftTalks*

- 
- When Scrum is not so good
  - What is Kanban
  - Why Kanban
  - Kanban board

# Sometimes Scrum is not so Good

When:

- Startups / prototyping
- Small team (1-2 developers)
- Support tasks

What:

- No fast feature deployment
- Too much time to start new sprint
- Too much time for process
- Variable QA loading

# What is Kanban

- 
- Kanban is Agile
  - Developed in Toyota
  - Demand forecasting VS Just-in-time delivery
  - Work-in-progress decreasing
  - Kanban board and cards
  - Not process but tasks oriented
  - No timeboxes (no sprints too)
  - Task estimation is optional (do we need it?)

# Why Kanban

- Feature driven development
- Focus on tasks instead of process

# Kanban Board

- Columns set is customizable
- Expedite row (optional)
- Column constraints (optional)
- Available in JIRA with Greenhopper
